

Swirling Flow®

Inspired by Nature, shaped by Veryan

Swirling flow

Nature's way of protecting patency,

engineered by Veryan to improve stenting outcomes as demonstrated in the MIMICS clinical programme.¹

The **BioMimics 3D stent** has a unique 3D helical geometry which imparts a gentle helical shape to the stented artery², provoking swirling flow-mediated increase in wall shear stress that has been shown to reduce intimal hyperplasia.³

Computational fluid dynamics representation.*

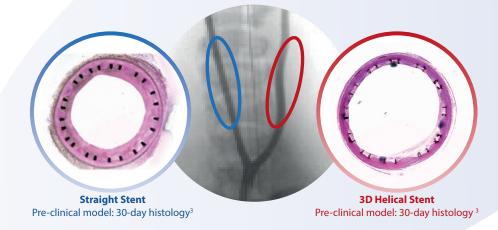

Improved patency

45% reduction in neointimal thickness at 30 days

 $(P < 0.001)^3$

Veryan's pre-clinical programme provides confirmatory evidence of the potential benefit of **swirling flow** generated by a stent with 3D helical geometry.

Arterial straightening and reduced wall shear stress may be important contributors to adverse clinical outcomes with straight stents in the femoropopliteal arteries.

Improved biomechanical performance⁵

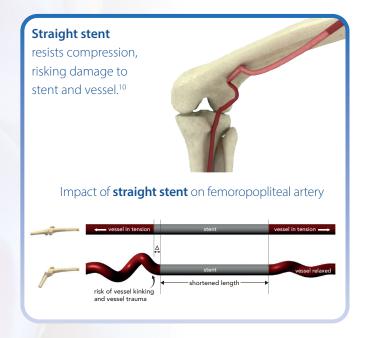

and excellent fracture resistance⁶

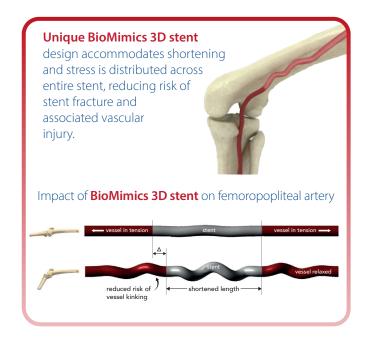

As the leg bends, the native femoropopliteal artery shortens under axial compression.⁷

0% Fracture in the **MIMICS** *RCT* and **MIMICS 2** Studies^{8,9}
